

St. Croix County has reported 2,196 cases of COVID-19 within the first 13 days of 2022. As of January 13, 2022, the County is averaging 197 cases per day, nearly double the highest level we have seen during this pandemic. Due to the high volume of positive COVID-19 cases, St. Croix County Public Health may not be able to personally contact everyone who tested positive for COVID-19 by phone. St. Croix County Public Health will send automated text, phone, and email alerts to residents who tested positive and have not been contacted by Public Health. These automated alerts will have a link to more information about what to do after testing positive for COVID-19.

In this release Public Health also shares updates about COVID-19 testing, vaccination, and guidance.

The full press release can be found on the St. Croix County website:
